

Comunicación SPI

7) Caja Negra

Tiempo clk_SPI $\rightarrow$ limite; 4.3^{max} MHz
 $t_{th} = 700 \text{ ns}$
 $\rightarrow$ min

$$N \text{ ciclos} = \frac{25}{4} = 6.25$$

$$\frac{25}{7} = 3.57 \text{ MHz}$$

$$\frac{25}{8} = 3.125 \text{ MHz}$$

$$t_{CH} = t_{CL} = \frac{7}{2(3.125 \cdot 10^6)} = 16 \cdot 10^{-8} = 160 \text{ ns}$$
